## SCORE OVER LENGTH SEARCHES

Attached is a score over length search. This search was developed to overcome limitations in most standard search systems which favor large sequences with high scoring, but lesser overall identity over smaller sequences with higher overall identity. This search is especially useful for relatively small nucleic acid or polypeptide target sequences (antisense, fragments, probes, primers, RNAi, epitopes, haptens, etc.) claimed functionally via a form of hybridization and/or identity language and having defined upper and lower polynucleotide and or polypeptide length limits.

The score over length search is performed by first running the query sequence using examiner-specified identity and polynucleotide or protein length limit parameters, and saving 65,000 hits and 0 alignments from each desired database. The resulting output is reformatted using a Microsoft Word macro and is imported into Excel. The summary table data are then sorted by the ratio of score of each hit sequence divided by its length and the accession numbers for all hits below the examiner's desired score over length parameters are deleted. The remaining accession numbers are used to pull the corresponding sequences from the databases into subdatabases enriched for good hits and the query sequence is re-run against these subdatabases to yield the final results.

The score over length cutoff for this search is  $\frac{70^{2}}{3}$ .

Examiner Please Note: This cover sheet should be included when submitting results to be scanned.

US-09-443-199C-1018

Sequence 1018, Application US/09443199C

Patent No. 6670464

GENERAL INFORMATION:

APPLICANT: Shimkets, Richard A.

APPLICANT: Leach, Martin

TITLE OF INVENTION: Nolymorphisms and Methods of Use Thereof

TITLE OF INVENTION: Polymorphisms and Methods of Use Thereof

TITLE REPERENCE: 15966-534A

CURRENT APPLICATION NUMBER: 60/109,024

PRIOR APPLICATION NUMBER: 60/109,024

PRIOR FILING DATE: 1998-11-17

NUMBER OF SEQ ID NOS: 1272

SOFTWARE: Curaden Patent Formatter Version 0.9

SEQ ID NO 1018

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 83, Application US/08222177A

Patent No. 5882979

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: Weber, James L.

TITLE OF INVENTION: LENGTH POLYMORPHISMS IN

TITLE OF INVENTION: (4C-dA)n. (4G-dT)n SEQUENCES AND METHODS OF USING SAME
NUMBER OF SEQUENCES: 460

CORRESPONDENCE ADDRESS:

ADDRESSEE: DeWitt Ross & Stevens, S.C.

STREET: 9000 Excelsior Drive, Suite 401
                                                         Sequence 53, Application US/08222177A

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 US-09-443-199C-1020

US-09-443-199C-1020

Sequence 1020, Application US/09443199C

Patent No. 6670464

GENERAL INPORMATION:
APPLICANT: Shimkets, Richard A.
APPLICANT: Lach, Martin
TITLE OF INVENTION: No.1eic Acids Containing Single Nucleotide
TITLE OF INVENTION: Polymorphisms and Methods of Use Thereof
FILE REFERENCE: 1596-134A

CURRENT APPLICATION NUMBER: US/09/443,199C

CURRENT APPLICATION NUMBER: 60/109,024

PRIOR PILING DATE: 1998-11-17

NUMBER OF ERQ ID NOS: 1272

SOFTWARE: CuraGen Patent Formatter Version 0.9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RESULT 57
US-08-222-177A-340/C

1) Sequence 340, Application US/0822177A

1) Patent No. 5582379

2) GENERAL INFORMATION:
APPLICANT: Weber, James L.
TITLE OF INVENTION: LENGTH POLYMORPHISMS IN
TITLE OF INVENTION: (GC-dA)n. (GG-dT)n SEQUENCES AND METHODS OF USING SAME
NUMBER OP SEQUENCES: 460
CORRESPONDENCE ADDRESS:
ADDRESSEE: DeWitt Ross & Stevens, S.C.
STREET: 8000 Excelsior Drive, Suite 401
APPLICANT: Weber, James L.
